Concentration Converter (mg/L, g/m³, mg/Nm³, gr/scf)

Convert a mass concentration in liquids or gases between kg/m³, g/L, mg/L, µg/L, g/m³, mg/m³, µg/m³, mg/Nm³, g/Nm³ and grains per standard cubic foot.

Method: Unit definitions per NIST SP 811 and the SI Brochure (exact where defined)

Input parameters

Unit system: SI

Parameter	Value	Unit
Concentration (choose its unit)	1.0000	mg/L

Calculated results

Parameter	Value	Unit
kg/m³	0.001000	kg/m³
g/L	0.001000	g/L
mg/L	1.0000	mg/L
µg/L	1,000.0	µg/L
mg/m³	1,000.0	mg/m³
µg/m³	1,000,000	µg/m³
mg/Nm³	1,000.0	mg/Nm³
gr/scf	0.41345	gr/scf

Notes for this case

• 1 mg/L equals 1 g/m³ and, for dilute water solutions, about 1 ppm by mass. Grains per standard cubic foot (60 °F) are converted to the normal-cubic-metre basis (0 °C), one scf holding 0.02679 Nm³ of gas. mg/m³ and mg/Nm³ are treated alike here, so to go between actual and normal conditions, or to correct to a reference O_2, use the gas flow and O_2 correction calculators. One grain is 64.79891 mg.

Formula and method

$$1\ \mathrm{mg/L} = 1\ \mathrm{g/m^3} = 1000\ \mu\mathrm{g/L}$$

Variables

c	Concentration (choose its unit)	kg/m³

Method and standards

Concentration units.

Assumptions and limits

- Same reference conditions on both sides.

References

Unit definitions per NIST SP 811 and the SI Brochure (exact where defined)

Report details

Report reference	FCC-3RNY-YA38 (the same inputs always give the same reference)
Generated	23 November 2026, 17:51 UTC
Calculator	Concentration Converter (mg/L, g/m³, mg/Nm³, gr/scf)
Method last reviewed	17 November 2026
Software release	FireCAD Calc, release of 22 November 2026
Release checks	2 reference cases of this calculator, computed independently, are checked on every release

Results are for engineering estimation. Verify critical designs against the referenced standards and your own data.
