Wind Turbine Power, Betz Limit and Annual Energy

Power in the wind through a rotor, the turbine output at a power coefficient (Betz limit 16/27), and annual energy from a capacity factor.

Input parameters

Unit system: SI

Parameter	Value	Unit
Air density	1.2250	kg/m³
Rotor diameter	100.00	m
Wind speed at hub height	9.0000	m/s
Power coefficient (turbine and drive)	42.000	%
Capacity factor (for annual energy)	30.000	%

Calculated results

Parameter	Value	Unit
Swept area	7,854.0	m²
Power in the wind ½ρAv³	3.5069	MW
Betz-limit power (16/27)	2.0782	MW
Turbine output at C_p	1.4729	MW
Annual energy at the capacity factor	3,870.8	MWh

Notes for this case

• Annual energy here scales the output at this wind speed by the capacity factor; a proper estimate uses the power curve and the site's wind distribution.

Formula and method

$$P = \frac{1}{2}\rho A v^3 C_p, \quad C_{p,max} = \frac{16}{27}$$

Variables

ρ	Air density	kg/m³
D	Rotor diameter	m
v	Wind speed at hub height	m/s
C_p	Power coefficient (turbine and drive)	-
CF	Capacity factor (for annual energy)	-
A	Swept area	m²
P_w	Power in the wind ½ρAv³	W
P_{Betz}	Betz-limit power (16/27)	W
P	Turbine output at C_p	W
E	Annual energy at the capacity factor	J

Method and standards

Actuator disc.

Assumptions and limits

- Annual energy = P × CF × 8 760 h (a 365-day year): the output at one wind speed scaled by a capacity factor, not an integral over a power curve and wind distribution. The Weibull wind energy calculator does that, with a 365.25-day year, so its CF means the long-term average output over rated power.
- Steady uniform wind.

Report details

Report reference	FCC-Q583-5VRZ (the same inputs always give the same reference)
Generated	23 November 2026, 17:34 UTC
Calculator	Wind Turbine Power, Betz Limit and Annual Energy
Method last reviewed	12 November 2026
Software release	FireCAD Calc, release of 22 November 2026
Release checks	2 reference cases of this calculator, computed independently, are checked on every release

Results are for engineering estimation. Verify critical designs against the referenced standards and your own data.
